Laminated glass with hidden heating

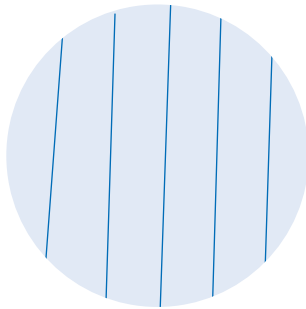

- Quickly defrost of the glass in weather conditions that cause fogging and icing.
- Reduced risk of injury by keeping the parts on the surface of glass in case of breakage.

Thin resistance wires between the two glasses.

Resistance tempered glass

- Quickly defrost of the glass in weather conditions that cause fogging and icing.
- Resistant to impacts and at the time of breakage it shatters into small and non-sharp pieces, reducing the risk of injury.

Resistance printing on the glass surface by mixing silver paint in addition to standard tempered glass.

Packaging

Individually packed

Fastened with polymer profile on the sides

Added extra protection to ensure they are not damaged
